

Syed Zaid Ali

BACKEND ENGINEER | FINTECH | AI ACCOUNTING

+91 9900713753 | zaidali753@gmail.com | Bengaluru, India | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Backend Engineer with 4+ years building scalable REST services, distributed workflows, and high-volume payment systems for FinTech and AI products. Hands-on with Python, Django, FastAPI, Rust, Actix, SQL, Redis, AWS, and Azure; experienced in clean architecture, event-driven systems, reliability engineering, service revamps, and production ownership.

EXPERIENCE

SDE II | Karbon Business

Oct 2024 - Present

- Led engineering ownership of a complete product revamp and service rewrite, raising durability, availability, maintainability, and release quality.
- Released Multi-user Flow, Journal Voucher Flow, Billing Module, and SSO + OAuth, expanding enterprise-ready accounting capabilities.
- Spearheaded FinBox bank-statement ingestion across PDF, Excel, and images; reduced manual effort 70%, achieved 98% accuracy, and improved onboarding 40%.
- Built real-time Tally APIs and a Windows connector for bi-directional AP, AR, and journal-voucher sync with idempotency, retries, and reconciliation; drove 3x adoption across 500+ users.
- Migrated 50 GB+ of production data without interruption and delivered prepaid-card flows handling INR 95L+ monthly GTV with no operational failures.
- Restored critical onboarding services 95% faster, increased test coverage to 80%, and reduced service failures by 50%.

Backend Engineer | Juspay

Sep 2022 - May 2024

- Owned reconciliation microservices and architecture for high-traffic payment applications processing millions of transactions daily.
- Led refactoring that improved maintainability and engineering efficiency by 40%; built generic APIs, cron jobs, ETL pipelines, and merchant integrations.
- Reduced integration latency by 30% through API architecture improvements and cross-functional delivery.
- Automated delivery with Docker and Jenkins, accelerating releases 50% while keeping downtime below 1%.

Technical Product Analyst Intern | Juspay

Feb 2022 - Aug 2022

- Architected a Kafka-based real-time logging pipeline and built a Kibana-style analytics dashboard for operational insight.
- Used customer feedback to accelerate product iterations 25% and improved data-collection accuracy to 95%.

TECHNICAL SKILLS

Languages & services: Python, Rust, Actix, Django, FastAPI, REST APIs

Data: PostgreSQL, SQL, Redis, BigQuery, ClickHouse, ETL

Platform: Kafka, Docker, Jenkins, AWS, Azure, GitHub, Bitbucket

Architecture: Distributed systems, microservices, clean architecture, event-driven design

Reliability: Idempotency, retries, reconciliation, scalability, security, data privacy

Observability & leadership: Kibana, logging, monitoring, code reviews, JIRA

EDUCATION

BE, Information Technology | Chandigarh University, India

2019 - 2023
